APPLICATIONS DUE: NOVEMBER 1, 2019

APPIC Program Numbers
General Track (158311)
Neuropsychology Track (158312)

Accreditation Status
The psychology internship at the Michael E. DeBakey VA Medical Center (MEDVAMC) is fully accredited by the Commission on Accreditation (CoA) of the American Psychological Association (APA). The MEDVAMC Psychology Training Program subscribes fully to the guidelines and principles set forth by the APA. The APA Code of Ethics provides another important guiding structure for our professional conduct.

Questions related to the program’s accredited status should be directed to the Commission on Accreditation:

Office of Program Consultation and Accreditation
American Psychological Association
750 1st Street, NE, Washington, DC 20002
Phone (202) 336-5979/ E-mail: apaaccr@apa.org
Web: www.apa.org/ed/accreditation
APPIC Member Status
The internship at MEDVAMC is an APPIC member program. Questions related to the membership status of the program should be directed to APPIC Central Office:

APPIC Central Office

Fax: (832) 284-4079

Internship Program Overview

Training Setting

The Michael E. DeBakey Veterans Affairs Medical Center (MEDVAMC) is a federally funded teaching hospital dedicated to clinical care, education, research. As a member institution of the Texas Medical Center, the world’s largest integrated health care system, the Michael E. DeBakey VA Medical Center (MEDVAMC) provides comprehensive outpatient and inpatient services, including acute and residential treatment programs, to Veterans in southeast Texas. Including its outpatient clinics located in the neighboring areas of Beaumont, Conroe, Galveston, Houston, Katy, Lufkin, Richmond, Tomball and Texas City, MEDVAMC logged more than 1.1 million outpatient visits during the 2018 fiscal year. The MEDVAMC serves a predominately Caucasian and African American, male population. Approximately 7% of the Veterans served are women and 65% are returning Veterans from Operation Iraqi Freedom and Operation Enduring Freedom.

Located on a 118-acre campus and built in 1991, MEDVAMC is a state-of-the-art facility with 357 acute care beds, a 40-bed Spinal Cord Injury Center, and a 141-bed Community Living Center. Veterans from around the country are referred to the MEDVAMC for specialized diagnostic care, radiation therapy, surgery, and medical treatment including cardiovascular surgery, gastrointestinal endoscopy, nuclear medicine, ophthalmology, and treatment of spinal cord injury and diseases. The MEDVAMC is one of few sites in the country to house specialized residential treatment programs specifically for women Veterans and returning male Veterans with posttraumatic stress disorder (PSTD). Veterans from other states within our catchment area (e.g., Oklahoma, Arkansas) attend these specialized treatment programs. The MEDVAMC is also home to many nationally recognized programs including, a Spinal Cord Injuries and Disorders System of Care Hub site for the south Central VA Health Care Network; Network
Polytrauma Center; an award-winning Cardiac and General Surgery Program; VA Epilepsy and Cancer Centers of Excellence; Health Services Research & Development Center of Innovation; Mental Illness Research, Education and Clinical Center; and one of the VA’s six Parkinson’s Disease Research, Education, and Clinical Centers. The MEDVAMC also has several mental health specialty care programs, including a Substance Use Treatment Program; PTSD Specialty Clinic; and the Women’s Center in Primary Care. The Center for Innovative Treatment of Anxiety and Stress (CITRAS) is a clinical research program within the Mental Health Care Line dedicated to the development and evaluation of cutting-edge evidence-based treatments for Veterans with anxiety and stress-related disorders.

Over 4,500 health care professionals provide high quality care to our Veterans. For more than 50 years, the MEDVAMC has provided clinical training for health care professionals through our major affiliate, Baylor College of Medicine (BCM). MEDVAMC operates one of the largest VA residency programs in the country with 269.7 slots in 40 sub-specialties. Each academic year, almost 2,000 students are trained through 144 affiliation agreements with institutions of higher learning in 19 states. Students from allied health professions such as psychology, nursing, dietetics, pharmacy, social work, occupational therapy, physician assistants, and a wide variety of medical specialties receive training here each year.

The MEDVAMC has received national awards and honors including accreditation from Joint Commission for hospital, long-term care, behavioral health care, home care, and substance abuse. In early 2019, the MEDVAMC was awarded re-designation for Magnet Recognition for Excellence in Nursing Services by the American Nurses Credentialing Center. In 2011, the medical center’s Pathology and Laboratory Medicine was awarded accreditation by the Accreditation Committee of the College of American Pathologists and its Psychosocial Rehabilitation and Recovery Center was awarded a 3-year accreditation by Rehabilitation Accreditation Commission (CARF). The MEDVAMC earned the Gold Seal of Approval in 2011 from the Joint Commission as an Advanced Primary Stroke Center. The MEDVAMC is the first VA medical center with this designation. The Psychology Internship, Residency in Clinical Psychology and Specialty Residency in Clinical Neuropsychology at MEDVAMC are each fully accredited by the American Psychological Association (APA) Commission on Accreditation. The MEDVAMC’s Health Care for Homeless Veterans, and Vocational Rehabilitation Programs; Comprehensive Integrated Inpatient Rehabilitation Program; and Inpatient and Outpatient Amputee System of Care Program were all awarded 3-year accreditations by CARF.
Research conducted by MEDVAMC staff ensures Veterans access to cutting-edge medical and health care technology. With hundreds of active research projects, the MEDVAMC Research & Development (R&D) Program is an integral part of the medical center's mission and plays an important role in the health care Veterans receive. The production of new knowledge, techniques, and products has led to improved prevention, diagnosis, treatment, and control of disease. In 2012, the Center for Health Services Research and Development (HSR&D) was selected by VA as one of six sites for a Collaborative Research to Enhance and Advance Transformation and Excellence initiative, which is a collaborative effort with a wide variety of VA system partners to address high-priority, VA system-wide issues. VA is a leader in many areas of research and participates in national research initiatives such as The Million Veteran Program (MVP) and the Network of Dedicated Enrollment Sites (NODES), one of ten NODES Centers funded throughout the country to increase the efficiency of local coordination of the VA Cooperative Study Program (CSP) studies at MEDVAMC.

The Mental Health Care Line (MHCL) is the predominant area in which psychology interns complete rotations throughout the year. The Care Line is organized into mental health programs as the primary management structure. Programs within the Care Line serve specific mental health patient populations, with particular attention to populations of special interest to VA. Specific programs include: General Mental Health Outpatient Clinic; PTSD Specialty Clinic; Mental Health Community Integration Program, Substance Dependence Treatment Program, and Health Care for Homeless Veterans. Inpatient programs consist of an acute care unit and inpatient care for older adults. Residential programs include the Women’s Inpatient Specialty Evaluation and Recovery and the Returning OEF/OIF Veterans Environment of Recovery programs. The MHCL offers comprehensive mental health services to eligible Veterans in a variety of inpatient and outpatient settings.

The MEDVAMC sponsors hospital-wide programs to increase awareness and understanding of culturally diverse populations. The Multicultural Diversity Subcommittee (MDSC) of the Psychology Training Program develops stimulating didactic/experiential training opportunities that are informed by the empirical literature for psychology trainees and staff. Professional development seminars and workshops (e.g., preparing for licensure, applying for post-docs and jobs) are timed throughout the year in accordance with the developmental milestones expected during the training year. The MDSC also sponsors a Mentoring Program in which students may choose a staff or post-doc to provide mentoring for a broad range of issues throughout the year. The MEDVAMC has an active EEO Program and sponsors hospital-wide programs such as:
Houston Hispanic Career Day Forum, Black and Hispanic Mentoring Programs, Cultural Diversity Training, and various celebrations and ethnic heritage programs.

The MEDVAMC has a small library with computerized links to a network of virtual library resources including the Jesse Jones Library located within the Texas Medical Center, which is equipped with reference books and current journals in the medical sciences, psychology, and other related disciplines. The MEDVAMC is near other hospitals within the Texas Medical Center and several teaching institutions, including Rice University and University of Houston.

Our Medical Center is conveniently located near several residential areas, and an excellent choice of affordable rental apartments or houses is available. Houston is often listed as one of the nation’s most affordable cities to live in, with many urban attractions, museums, parks, zoo, and a vibrant and diverse restaurant scene. For sports aficionados, Houston hosts the Texans, Astros, Rockets, and Dynamo sports teams. Houston is also the home of the Johnson Space Center, NASA’s mission control center of many space missions, including the Orion mission to Mars.

Psychology Internship

Training Aims
The Pre-doctoral Internship Program in Professional Psychology is administered by the Psychology Training Program which is part of the Psychology Practice at the MEDVAMC. The internship is offered to students in APA and CPA approved graduate doctoral clinical and counseling psychology programs. The overarching goal of the Psychology Internship Program is to prepare interns for the practice of professional psychology in a variety of settings with a particular emphasis on preparation for VA and other medical/institutional settings. It is our mission to assist interns, not only in the acquisition of a range of professional skills, but to assist in the development of a professional identity and role. Additional goals include teaching interns skills for entry into the practice of professional psychology; the ability to integrate theory, scientific inquiry, empirical data, and practice; to contribute to the knowledge and practice of professional psychology; and obtain diverse training experiences to enhance their skills as broadly trained psychologists who can be effective in a variety of service delivery contexts. The internship offers nine intern positions. Eight of these positions reside within the Generalist Track and one position is dedicated to a Neuropsychology Track.

Training Model and Program Philosophy
As a training program in health service psychology, our philosophy reflects a scientist-practitioner model of training that values the integration of empirical evidence and practice. Our training model aims to provide interns with the most up-to-date knowledge, skill, and interventions for a rapidly changing health care arena. Training follows a developmental sequence and is dedicated to a quest for scholarly inquiry and professional problem solving, with supervisors serving as professional role models to interns. Opportunities are also available for interns to participate in ongoing research and program evaluation projects. Interns have up to 4 hours per week of protected research time and are encouraged to engage in ongoing projects within the hospital.
Training Program Competencies

Consistent with our program aims, training will focus on the following broad competencies:

1. **Research** – Interns will demonstrate the ability to engage in ongoing scholarly inquiry as it relates to their clinical work. This includes consulting the literature and integrating relevant theories and practices generated from empirically derived data into the psychological services they provide to patients. Interns are encouraged to be actively involved in research and program evaluation related to mental illness and health.

2. **Ethical and Legal Standards** – Interns are expected to respond professionally in increasingly complex situations with a greater degree of independence across levels of training including knowledge and in accordance with the APA Code and relevant laws, regulations, rules, policies, standards, and guidelines.

3. **Individual and Cultural Diversity** – Interns must demonstrate ability to conduct all professional activities with sensitivity to human diversity, including the ability to deliver high quality services to an increasingly diverse population. They demonstrate knowledge, awareness, sensitivity, and skills when working with diverse individuals and communities who embody a variety of cultural and personal backgrounds and characteristics.

4. **Professional Values, Attitudes, and Behaviors** - Interns should demonstrate continued professional growth as they move toward independent functioning in the profession of psychology. This includes participation in professional activities (e.g., attendance at regional and national conferences), involvement in the production of scholarly material, and progress toward securing a postdoctoral position or job, subsequent to completion of internship training. Interns are expected to demonstrate a strong knowledge of ethical and legal guidelines, standards of professional conduct, and to show a rigorous adherence to these standards.

5. **Communication and Interpersonal Skills** - Interns should demonstrate effective communication skills and the ability to develop and maintain successful professional relationships.
6. **Assessment** - Interns will develop competence in evidence-based psychological assessment with a variety of diagnoses, problems, and needs. Interns are expected to select and implement multiple methods and means of evaluation that are responsive to and respectful of individuals from diverse backgrounds. Interns are also expected to assess a patient’s needs and assets accurately and develop appropriate diagnostic formulations relevant to offering the most effective treatment.

7. **Intervention** - Interns are expected to demonstrate competence in evidence-based interventions consistent with a variety of diagnoses, problems, and needs and across a range of therapeutic orientations, techniques, and approaches. Interns are also expected to be aware of diversity issues as they impact the selection and implementation of therapeutic interventions.

8. **Supervision** – Interns will demonstrate knowledge of evidence-based supervision models and practices and apply this knowledge in direct or simulated practice.

9. **Consultation and Interprofessional Skills** – Interns are expected to reflect the intentional collaboration of professionals in health service psychology with other individuals or groups to address a problem, seek or share knowledge, or promote effectiveness in professional activities. These skills may be demonstrated through direct or simulated consultation opportunities.

**Minimum Levels of Achievement**

The program has a number of “exit criteria” or requirements for successful internship completion. Acceptable competency and performance levels must be demonstrated in the multiple areas which supervisors rate at the end of each rotation.

In order for Interns to maintain good standing in the program they must:

- For the first set of rotations, obtain ratings of at least a “2” [basic competency; acceptable performance; further growth needed; regular supervision on challenging cases/new skills areas (entry-level intern)] for all competencies on the Evaluation of Intern Competencies form.
- For the second set of rotations, obtain ratings of at least a “3” [intermediate competency; periodic supervision needed on challenging cases and new skill areas (mid-level intern)] for all competencies on the Evaluation of Intern Competencies form.
• No items in competency areas will be rated as a “1” [lacks basic competency; little autonomous judgment; substantial supervision on straightforward cases; remediation required (entry/mid-level practicum)].
• For the third set of rotations, demonstrate progress in those competencies on the Evaluation of Intern Competencies form that have not been rated at a “4” or higher [full competency; sound critical judgment/thinking; some consultation needed on complicated/ specialized areas (exit-level intern/readiness for practice)].
• Not be found to have engaged in any significant unethical behavior.

In order for Interns to complete the program successfully, they must:
• Complete the one-year training term in no less than 12 months.
• By the end of the last training period, obtain ratings of at least a “4” [full competency; sound critical judgment/thinking; some consultation needed on complicated/ specialized areas (exit-level intern/readiness for practice)] for all competencies on the Evaluation of Intern Competencies form and the Assessment and Intervention Competency Demonstration Evaluation forms.
• Successfully pass competency demonstrations in assessment and interventions by obtaining ratings of at least a “4” [full competency; sound critical judgment/thinking; some consultation needed on complicated/ specialized areas (exit-level intern/readiness for practice)] for all competencies on the Assessment and Intervention Competency Demonstration Evaluation forms.
• Not be found to have engaged in any significant unethical behavior.

Supervision
Interns have an identified supervisor and backup supervisor on each rotation. On each major rotation (16 hours/week), at least one hour of regularly scheduled individual supervision is required and an additional minimum of one hour of group supervision. For minor rotations (8 hours/week), at least a half-hour of regularly scheduled individual supervision is required and an additional minimum of a half-hour of group supervision. The ground rules of supervision are discussed at the beginning of the rotation and must conform to the terms of the supervisor agreement form. Supervisors must be on site at all times during the interns’ term of duties and must be available for emergency issues as they arise at any time. Both supervisors and interns are equipped with pagers for initiation of communication as needed.
Evaluations

Interns are expected to demonstrate understanding and competence in all nine areas competency areas mentioned above. Toward the end of the training year, interns are expected to present assessment and therapy cases so that their competence can be formally evaluated. Interns are provided feedback at the mid-point of each rotation (approximately 8 weeks after beginning a rotation). This allows the supervisor to share areas of strength and relative weakness for the intern to continue developing during the rotation. On completion of each training rotation, supervisors evaluate the intern’s performance across the nine competency areas during the preceding four months. General feedback regarding the intern’s progress is shared with other supervisors during Psychology Practice meetings. A written evaluation of the intern’s general progress in training is furnished to the intern’s departmental Director of Training at mid-year and at the end of the year. Each intern is also asked to make an evaluation of the supervision received during the preceding rotation. At the end of the internship year each intern is asked to evaluate the internship experience during an exit interview. This information is relayed to the Training Committee and Psychology Practice as part of the program’s efforts to engage in ongoing self-evaluation and improvement.

INTERNSHIP GENERAL TRACK

In order to meet our training goals involving appropriate breadth and depth of psychological service delivery expertise for the eight General Track interns, trainees are expected to select six half-time placements of four months duration each. These placements are designed on the basis of intern preferences, but with an eye towards achieving a balance of experiences. The intern will have a mix of outpatient and inpatient placements, along with a distribution of therapy, assessment, and consultation experiences. The intern is typically assigned to two concurrent half-time placements lasting four months each. The sequence of placements is sometimes determined by an intern’s particular need for early placement in a content area where he/she may be seeking a later post-doctoral fellowship (e.g., Trauma, Primary Care Mental Health). The following is an example of two of the possible training tracks.

INTERNSHIP NEUROPSYCHOLOGY TRACK

Our training goals for the Neuropsychology Track intern include providing appropriate breadth and depth of psychological service delivery expertise and preparing the neuropsychology intern to apply and be competitive for formal postdoctoral residency in clinical neuropsychology. In the interest of achieving these goals, the intern is expected to select three half-time placements in neuropsychology and three half-time placements outside of neuropsychology, each lasting four months. The Neuropsychology Track intern should expect to have one half-time neuropsychology placement during each of the four-month rotations. These placements are designed on the basis of intern preferences, but with an eye towards achieving a balance of experiences in neuropsychology and general psychology. The intern will have a mix of outpatient and inpatient placements, which will provide experiences in assessment, therapy, and consultation. In addition to the training seminars provided to interns on the general track, training seminars of particular relevance to the Neuropsychology Track intern include brain cuttings, Neuropsychology Case Conference, and a host of other local and online didactics offered through the Neurology Care Line and Polytrauma System of Care. The following is an example of two possible rotation schedules for a Neuropsychology Track intern.

</table>

There are currently three full-time neuropsychologists approved to provide training opportunities at the MEDVAMC (Adam Christensen, Ph.D., Brian Miller, Ph.D., and Nicholas Pastorek, Ph.D., ABPP), and we anticipate that a fourth full-time neuropsychologist will be approved to supervise before the end of the 2019-2020 training year (Jonathan Grabyan, Ph.D.). The neuropsychology intern is assigned to a specific staff psychologist for professional supervision during each rotation. The neuropsychologists work in different care lines and are affiliated with specialty programs such as the Epilepsy Center of Excellence, Parkinson’s Disease Research and
Clinical Center, and Polytrauma site, thus providing interns access to extremely diverse clinical and research training experiences. The MEDVAMC has an APA specialty practice accredited postdoctoral fellowship in clinical neuropsychology that currently supports four postdoctoral residents, while also providing training for graduate-level externs, with whom the neuropsychology intern will have opportunities to receive and provide supervised supervision. Patient populations served by neuropsychologists at the MEDVAMC typically include traumatic brain injury, various dementias and demyelinating disorders, seizure disorder, stroke, psychiatric disorders including severe mental illness, and movement disorders.

**ADDITIONAL INFORMATION ABOUT TRAINING OPPORTUNITIES**

The Psychology Practice is comprised of over 110 psychologists, and over 55 serve as approved supervisors for the training program. Hence interns will have an opportunity to gain exposure to varied theoretical orientations. Group and individual therapy opportunities are available and include treatment approaches such as CBT, group process, interpersonal, and psychoeducation depending on the needs of the population served and the theoretical orientation and style of the individual supervisor.

Weekly training seminars on clinical assessment, psychotherapy, diversity and professional issues are scheduled throughout the year. Other conferences, staff meetings, case presentations, and regular unit staffing meetings are scheduled so that interns can attend. To facilitate further communication among the interns and between the interns and staff, the interns meet with the Director of Training each week to discuss professional development and matters relevant to training, including issues of concern to the interns. Approximately every other month, MEDVAMC interns participate in special topic didactic opportunities with interns from other local internship programs. This affords the interns in the Houston area an opportunity to form a support network and discuss professional issues.

The patient population at the MEDVAMC is quite diverse, reflecting the rich diversity of Houston and the large catchment area of VISN 16. Patients come from various cultural, ethnic, and socioeconomic backgrounds, range from young to older adults, and have varied psychiatric and physical disabilities. The internship program seeks to help interns enhance their awareness, appreciation, and understanding of diversity issues as it relates to their professional identities and influence on patient care. The program structure provides interns with ample opportunities to work with patients from various backgrounds. Interns advance their skills in working effectively with diverse patient populations through training that includes: a wide selection of clinical rotations, different therapy formats, outpatient and inpatient clinical work, weekly training
seminars, supervision, interdisciplinary staff meetings, case conferences, and regularly scheduled mental health and hospital-wide conferences.

We currently have funded positions for nine pre-doctoral Interns (eight General Track and one Neuropsychology Track). The internship year begins the week of July 19, 2020.

CONTACT INFORMATION
The Michael E. DeBakey VAMC psychology training faculty appreciates your interest in our training program and wishes you the best in your professional development in psychology. Please send general inquiries to: VHAHOUMHCLPsychologyTraining@va.gov. If you have further questions or comments, please contact the following individuals:

Application Process

Eligibility
Qualifications for internship include: U.S. citizenship, as per nation-wide VA guidelines; applicants must be doctoral candidates (Ph.D. or Psy.D.) enrolled in an APA or CPA approved counseling or clinical psychology program; and have completed a minimum of 600 total practicum hours (400 therapy/intervention hours and 200 assessment hours). Our internship observes all rules and policies set by the Association of Psychology Postdoctoral and Internship Centers (APPIC). This internship site agrees to abide by the APPIC policy that no person at this training facility will solicit, accept or use any ranking-related information from any intern applicant. Current APPIC guidelines and applications are provided on the APPIC website.*

Appointment as an intern is also contingent upon successfully passing standard federal employment screening (e.g., security background check, passing employment physical, electronic fingerprinting, etc.). Prior to starting, fellows are required to have immunizations (or proof of immunity) for measles, mumps, rubella, and varicella. The Federal Government requires that male applicants to VA positions who were born after 12/31/59 must sign a Pre-appointment Certification Statement for Selective Service Registration before they are employed. It is not necessary to submit this form with the application, but this form will need to be completed if you are selected for this internship.

Selection Process
All complete applications received by the deadline will be screened by the Psychology Training Committee, and approximately 45-50 applicants will be invited to interview. We seek applicants who have a solid foundation in assessment, intervention, and scientific inquiry. Specifically, applicants’ experience with adult populations, familiarity with individual/group-based interventions, and scholarly pursuits in the form of scientific presentations and publications are considered. We also consider prior experience working in VA or medical settings. Overall, our selection criteria are based on a "goodness-of-fit" with our scientist-practitioner model, and we look for interns whose training and career goals match the training our program offers. All applicants will be informed of whether they will be invited for an interview no later than December 15th. The MEDVAMC is an Equal Opportunity Employer, and the Psychology Training Program is committed to ensuring a range of diversity among our trainees. We select candidates representing different ethnic/racial backgrounds, sexual orientations, disabilities, geographic locations, and life experiences.
**Interview Process**

We encourage on-site interviews and typically do not conduct telephone interviews. Applicants with a disability who require accommodations for the application process or interview are encouraged to contact the Training Director to discuss their needs. We will make reasonable accommodations upon request. Interviews will span a half day, occurring either in the morning or afternoon. They will include a brief meeting and orientation with training leadership, interviews with four psychology staff members including a current post-doc, meeting with the current interns, and learning about various rotation opportunities from supervisors over lunch. Interviews will be conducted on **January 6, 10, 13, and 17, 2020.**

**Application Procedures**

Our application process abides by the policies and procedures developed by the Association of Psychology Postdoctoral and Internship Centers (APPIC), including participation in the Match. A completed online AAPI (APPIC Application for Psychology Internships) is required. Please clearly indicate in your cover letter if you are applying for the General track or the Neuropsychology track. As part of your application, please use the online APPIC Reference Portal to submit letters of recommendation from three professionals familiar with your background (at least one must be from your academic advisor). We would like to hear from faculty members familiar with your academic preparation, as well as supervisors familiar with your clinical work. All application materials must be submitted through the online AAPI and received by **November 1st.** No materials will be accepted by e-mail or US mail.

**Application Requirements List**

1. Cover letter, stating your interests in training at the MEDVAMC
2. Curriculum Vita
3. Complete AAPI Online application
4. Transcripts of all graduate work
5. Three letters of recommendation, as described above

**Position Information**

The internship comprises a 12-month appointment offering 2080 hours of training. The current stipend is $29,879 rendered in 26 bimonthly payments. Benefits include 10 federal holidays, plus sick and annual leave accrual totaling 26 days for the year and reasonably priced medical insurance. Interns also may have up to five paid days per year granted to attend relevant professional conferences and approved educational activities.
Psychology Training Rotations

PRIMARY CARE – BEHAVIORAL MEDICINE

Primary Care-Mental Health (PC-MH)
Angelica Chaison, Ph.D.
The goal of this rotation is to provide interns an opportunity to increase proficiency in assessing and providing brief clinical services to a variety of Veterans in primary care (primarily Clinic 3). Trainees will be presented with a variety of cases with some emphasis on mild- to- moderate depression, anxiety, and/or alcohol/substance misuse, which are potentially co-morbid with health problems such as diabetes, chronic pain, and obesity. Opportunities exist for interns to (1) conduct diagnostic assessments for walk-in and/or scheduled patients referred by their primary care providers, (2) conduct short-term, brief individual therapy (typically cognitive-behavioral or solution focused) with the aim of transferring patients’ care to their primary care providers as appropriate, (3) develop and/or co-facilitate various behavioral medicine psychotherapy groups (including interactive psychoeducational or cognitive-behavioral groups with a focus on anxiety, depression, and healthy lifestyles), and (4) collaborate with other professionals within primary care including mental health and general practice providers. Opportunities also exist for the intern to participate in program evaluation as well as ongoing education efforts for primary care providers regarding mental health services.

Pain Evaluation Center
Elizabeth Hentschel, Ph.D.
This rotation provides an opportunity to assess and treat Veterans with chronic pain. Trainees will complete evaluations of Veterans initiating care in the Pain Evaluation Center. This process involves inquiring about someone’s pain experience to help develop treatment goals and a treatment plan, as well as interpreting assessments completed by the Veteran. Trainees will gain experience in individual therapy, focusing on evidence-based treatments for chronic pain, creating Personalized Health Plans, and using telehealth if desired (with VA-mandated training). They may also participate and co-lead groups, such as Relaxation Group or Pacing group. The rotation offers an opportunity for trainees to interact directly with an interdisciplinary team by attending weekly treatment planning meetings and consulting with other clinicians regarding initial and follow-up appointments. Trainees may also interact with staff in other MEDVAMC care lines (e.g., Anesthesia Pain Clinic, Physical Medicine & Rehabilitation). Should program development projects arise during the time of the rotation, trainees would be welcome to participate.

Cross-Sex Hormone and Gender Confirming Surgical Assessments
Michael Kauth, Ph.D.
This rotation provides trainees the opportunity to gain experience in conducting cross-sex hormone evaluations for transgender patients, which includes determining a diagnosis of Gender Dysphoria, assessing readiness to initiate hormone therapy, and making recommendations to support positive health outcomes. Trainees communicate the results of the evaluation to transgender patients and coordinate follow up with the patient’s providers and other clinical services, such as Endocrinology. In addition, trainees may have the opportunity to
conduct gender confirming surgical assessments for a letter of support to the patient’s non-VHA surgeon. Most commonly assessments focus on chest reconstructive surgeries but may involve genital reconstructive surgeries. Gender confirming surgeries are not conducted by nor paid for by VHA. The time commitment for this rotation is flexible (major or minor rotation).

**Women’s Health Administrative Rotation**

**Deleene Menefee, Ph.D.**

The Women’s Health Center (WHC) is a specialty comprehensive care clinic at the Michael E. DeBakey VA Medical Center dedicated to providing a full range of high-quality, compassionate health care services to women Veterans in a comfortable and inviting environment. Trainees will gain administrative and program development experience with the facilities designated Women Veteran’s Program Manager. Opportunities exist to polish interprofessional/interdisciplinary skills interacting with facility-wide committees and national VA initiatives. The overall goal of the rotation is to expose the trainee to women Veterans as an underserved, minority population with unique mental and physical healthcare needs. This rotations is designed so that trainees will: 1) be exposed to extant literature on the needs of women Veterans; 2) gain knowledge VHA directives at a national, VISN, and facility level; 3) participate in the ongoing development, implementation, and evaluation of these directives, including reproductive health across the life span, maternity care coordination, infertility, breast health imaging, and gender-specific primary care teams; and, 4) and gain exposure to SAIL/HEDIS performance measures that guide program development. Although this rotation is not focused on the assessment or provision of mental health services, the trainee will have brief, interventional opportunities to manage patients in distress, mediate relationships between patients and providers, interact with the patient experience office to balance the expectations of providers with patient requests. Trainee will have the opportunity to develop a short-term women’s mental health focused project for evaluation and dissemination. Research opportunities are available, but largely dependent on the trainee’s interest.

**Home Based Primary Care (HBPC)-Health Psychology Focus**

**Xuan V. Nguyen, Ph.D**

HBPC is an interdisciplinary program which provides opportunities for collaboration with other disciplines such as primary care providers, nursing, social work, dietician, psychiatry, occupational therapy, and pharmacy. Trainees are offered opportunities to develop skills in geriatric care by delivering mental health services in patients’ homes. Trainees work with mental health concerns such as neurocognitive disorders, mood disorders, and substance use disorders that are co-morbid with health-related problems such as diabetes, chronic pain, sleep, cardiovascular disease, and terminal illnesses. This rotation offers experiences in initial mental health evaluations, brief individual therapy, family psychotherapy, caregiver support, crisis intervention, safety planning, psychoeducation, and participation in interdisciplinary treatment team meetings. In addition to conducting in-person home visits, trainees who are interested, will have the opportunity to conduct Clinical Video Telehealth (CVT) psychotherapy sessions, where providers conduct telehealth sessions directly into veterans’ homes. Trainees with an interest in mindfulness practices will have the opportunity to develop skills in delivering mindfulness interventions as well as participate in Healthy Staff, Healthy Vet, a bimonthly mindfulness practice for hospital staff. This training rotation allows for development of skills in cognitive behavioral approaches, motivational interviewing, and integrated elements of acceptance commitment therapy.
Home-Based Primary Care (HBPC)
Kevin Jacques Siffert, Ph.D.
The rotation in Home Based Primary Care (HBPC) provides trainees with the opportunity to work closely within a Patient Aligned Care Team (PACT) model. PACT is the cornerstone of the New Models of Care transformation initiative intended to transform the way Veterans receive their care. Trainees on this rotation will learn how to provide patient-driven, proactive, personalized, team-based care oriented toward wellness and disease prevention. Common problems presented during individual psychotherapy center on the Veteran’s struggle to adaptively manage anxious and affective symptoms. In addition, Veterans in this program are often seeking to achieve and/or maintain an optimal level of functioning and quality of life, in the wake of biopsychosocial losses associated with aging, increased dependency, and fear of disease process. Trainees will have the opportunity to conduct and provide: initial mental health evaluations, brief individual therapy, family psychotherapy, crisis intervention, safety planning, psychoeducation, and caregiver support. There are also, some opportunities to help Veterans with serious mental illness (e.g., major affective and severe schizophrenic spectrum disorders). It is anticipated that trainees will actively plan for and participate in weekly PACT meetings. The HBPC psychologist will accompany the trainee off site, as mental health services are conducted in the Veteran’s own home, medical foster home, personal care home, and assisted living facility. Taken together, this rotation offers great flexibility and will be tailored to the trainees interests and stage of professional development.

The Pain Evaluation Center
Paul A. Sloan, Ph.D.
The Pain Evaluation center is a combined Step One/Step Two Pain evaluation and management clinic which specializes in Psychological, Medical, and Psychiatric evaluation of a variety of chronic pain conditions and the Psychological management of chronic pain conditions. Interns participating in this rotation will have the opportunity to participate in clinical interviews and psychological assessments focused on the impact of pain on Quality of Life. From a therapeutic perspectives, interns will have the opportunity to participate in both individual and group interventions with primarily a CBT or ACT framework. They will be participating in multidisciplinary treatment team meetings with Psychology, Psychiatry, Internal Medicine, and Nursing and there may be an opportunity to meet with other disciplines in Rehabilitation Medicine and Anesthesiology. By the end of the rotation, interns will have a good understanding of the biopsychosocial aspects of chronic pain, with exposure to a variety of medical conditions which create chronic pain and various treatment strategies for addressing these issues.

Primary Care – Mental Health Integration (PC-MHI)
Vincent Tran, Ph.D.
This rotation entails assessment and the provision of brief clinical services to a variety of Veterans based out of the primary care clinics (particularly Clinic 1). Trainees will be presented with a variety of cases including mild- to- moderate depression, anxiety, and/or alcohol/substance misuse, which are potentially co-morbid with health problems such as diabetes, chronic pain, and obesity. Opportunities exist for trainees to conduct focused diagnostic assessments and provide treatment recommendations particularly for walk-in patients referred by their primary care providers; conduct short-term, brief individual therapy (often cognitive-behavioral or solution focused) with the aim of transferring patients’ care to their primary care providers as appropriate; co-facilitate psychotherapy groups; collaborate with other professionals within primary care including mental health and general practice providers; and facilitate smooth linkages with specialty services as needed. Opportunities also exist for trainees to participate in program evaluation as well as ongoing education efforts for primary care team members regarding mental health services.
Chronic Pain
Jeffrey West, Ph.D.
This rotation involves training experiences in assessment and treatment for Veterans experiencing chronic pain. Direct involvements with a broad range of Veteran characteristics and pain etiologies will be assured. The trainee will gain experience in both individual and group assessment and intervention, including participation as co-leader in regular groups such as Initial Assessment for Pain Clinic, Fibromyalgia, Complex Pain Conditions, “Alumni Pain/Coping Lab” (i.e., for Veterans who have already participated in introductory level education and groups). An important facet of this training rotation involves regular interaction and treatment planning with a variety of disciplines and care line staff outside as well as inside Mental Health, including Anesthesia Pain Clinic and Physical Medicine & Rehabilitation. The rotation will offer education and exposure to ongoing developments in chronic pain assessment and treatment following the Stepped Care Model at regional and national VHA levels. In addition, the MH PC Complex Chronic Pain Program is committed to continual evidence-based development, expansion and improvement efforts. This affords options within rotations for significant training involvements in administrative and program development and evaluation activities related to chronic pain services and service delivery.

PRIMARY CARE – HEALTH PSYCHOLOGY

Pre-Surgical Assessment
Shiquina Andrews, Ph.D.
This rotation allows trainees the opportunity to gain experience in performing pre-surgical assessments. As MEDVAMC is a VA-approved Transplant Center for liver and kidney transplant patients, the bulk of pre-surgical assessments will pertain to evaluating both local and remote (i.e., Veterans from other VA facilities) patients for transplant candidacy. Trainees will also have the opportunity to complete pre-transplant evaluations for bone marrow, heart, and lung patients, who will be referred to other facilities for transplantation. Finally, the MEDVAMC was approved in 2016 to perform kidney donor surgery. Thus, trainees will have the opportunity to perform donor mental health assessments, many of which are “civilians” (i.e., non-Veterans). Trainees will provide consultation to an interdisciplinary team of health professionals by presenting recommendations at twice-weekly Solid Organ Transplant Medical Review Board (MRB) meetings. Trainees may also have the opportunity to perform other types of pre-surgical evaluations as available and per trainee interest. The time commitment for this rotation is flexible (major or minor rotation). However, trainees interested in completing a major rotation must be available for MRB attendance.

Spinal Cord Injury Care Line Psychological Services
Sarah Beckwith, Ph.D. and Herb Ames, Ph.D., ABPP, ABN
This rotation occurs within the Spinal Cord Injury Care Line and centers on assessment, treatment planning, intervention, and consultative services in the treatment of a very heterogeneous mix of inpatient and outpatient Veterans with spinal cord injuries or dysfunction (SCI/D) of varied anatomical levels and completeness. The rotation is in a rehabilitation context but also has elements of behavioral medicine, health psychology, geropsychology, and generalist psychological practice. Assessment experiences include interview-based assessment, Whole Health assessment, clinical syndrome testing, objective personality testing, and neuropsychological screening. Neuropsychological assessment experiences are not routine but may be available based on trainee interest and Veteran need. Intervention experiences may include individual, relationship/family, and group contexts. Occasional crisis-related assessments and interventions are components of the typical rotation. System competency (i.e.
knowledge related to accessing needed general and specialty services) development is an important training objective. SCI Care Line service delivery focuses on reducing obstacles to recovery, mobilizing assets, health promotion (& secondary condition prevention), and fostering optimal adaptation/adjustment. Improving adaptivity of appraisals and coping skills, as well as identifying and mitigating the negative effects of co-morbid cognitive/psychological limitations, are major psychological roles. Improving motivation and treatment adherence is a common theme when psychological assistance is sought. Since all care occurs in the context of an interdisciplinary team, psychology is often consulted to assist in optimizing patient-provider interaction patterns should these become strained. An overview of medical and pharmacological aspects of rehabilitative medicine will be gained through supervision and interactions with a range of other professionals on the SCI care team. Both supervisors have a strong commitment to the MEDVAMC Psychology Training program. Both have pragmatic and integrative orientations, an appreciation of empirical and conceptual bases of practice, and a focus on individualized training. Dr. Ames is ABPP board certified in Rehabilitation Psychology & Geropsychology, as well as a Diplomate in Professional Neuropsychology through the ABN (American Board of Professional Neuropsychology). Dr. Beckwith’s background is in clinical health psychology and behavioral medicine and she takes an integrative approach using CBT, ACT, Motivational Interviewing, mindfulness and relaxation training. Dr. Beckwith is also interested in multicultural and diversity-related issues and serves on the Multicultural Diversity Subcommittee for the Psychology Training Program. Dr. Ames and Dr. Beckwith also have experience with evidence-based CBT for chronic pain (CBT-CP). Depending on the trainee’s interests and time availability, there are opportunities to be involved in research-related products (e.g., posters; presentations; journal submissions) regarding psychological processes and outcomes in our Spinal Cord Injury Center.

**Oncology/Hematology**

*Elizabeth Conti, Ph.D.*

This rotation provides opportunities to learn about different types of cancers and hematological conditions, treatments, side effects of treatments, and typical psychological reactions to cancer. Trainees will have the opportunity to provide assessment, individual therapy, and group therapy to Veterans with cancer and hematological conditions, as well as consultation to their physicians, nursing staff, dietitian, social worker, and other team members. Most activities occur in the Cancer Center, a multidisciplinary specialty medical clinic. Additional experiences may be available in Urology, ENT, and the Women's Health Center. In addition to weekly Tumor Board meetings, trainees will participate in psychosocial distress screening, walk-in/same day and scheduled assessment, as well as a broad range of individual therapies (e.g., CBT, ACT and mindfulness training, supportive, therapy for end-of-life concerns). Issues typically addressed during therapy are depression, anxiety, adjustment, managing side effects, smoking/alcohol cessation, pain, insomnia, death and suicidal ideation, and caregiving relationships. Therapy is flexible and provided with attention to treatment burden and the Veteran's individual needs (i.e., may be short term or longer-term, weekly or monthly). Group therapies include support groups co-led with the Onc/Hem social worker and a skills-based stress management group for individuals with urologic cancers. Trainees may also provide services to individuals referred by palliative care. Opportunities to be involved in quality improvement projects may also be available.

**Cardiology**

*Francis Deavers, PhD.*

This rotation provides opportunities to learn about different cardiac conditions and treatments, their impact on quality of life and functioning, and the interrelationship between psychological and physical health. Trainees will have the opportunity to provide assessment and individual
therapy to Veterans with cardiac conditions, both on an outpatient basis and in the cardiac intensive care unit (CCU). Issues typically addressed during therapy are depression, anxiety, adjustment, smoking/alcohol cessation, insomnia, and health behavior change. This rotation will emphasize use of the biopsychosocial model in case conceptualization, as well as flexible implementation of evidence-based interventions (e.g., ACT, CBT, MI) alongside supportive and meaning-focused therapies. As part of this rotation, trainees will consult with physicians, nursing staff, social workers, and other team members through various activities including: participating in rounds on CCU, shadowing a cardiologist in clinic, participating in Behavioral Health Program consultation meetings, and attending cardiology case presentation meetings. Additional experiences may be available including facilitating a heart failure support group and engaging in program development activities.

Primary Care Mental Health Integration—Health Psychology Focus
Dorothy Octavia Jackson, Ph.D.
This rotation is designed to provide interested trainees with clinical training opportunities in the area of primary care mental health, with an emphasis on health psychology cases. The Primary Care Mental Health Integration (PCMHI) program supports primary care providers in identifying and treating patients with a variety of mental health diagnoses. This rotation will offer opportunities, where available, to focus on cases of mild-to-moderate mood and anxiety disorders with co-morbid health-related problems such as cardiovascular disease, pulmonary diseases, diabetes, and/or obesity. Trainees will have the opportunity to provide evidence-based, time-limited individual therapy sessions in a fast-paced primary care setting. Opportunities may also exist for trainees to co-facilitate the following groups: 1) Health Behavior Change Class: a 6-week curriculum that integrates motivational interviewing, mindfulness, and general behavioral health strategies to help veterans set and reach specific health-related behavior changes or 2) Living with Chronic Health Conditions Class: a 6-week process-oriented group that primarily utilizes Acceptance and Commitment strategies to provide support around the emotional distress and lifestyle demands associated with living with a chronic health condition.

Mental Health Intensive Case Management (MHICM)
Joshua Johnson, Ph.D.
MHICM serves Veterans with a diagnosis of SMI in a wide range of settings, most often in community settings such as their homes. Trainees on this rotation will gain experience with assessment, clinical intervention, case management, and case consultation, within an interdisciplinary team including MDs, NPs, RNs, SWrs, LMFTs, VRS, and peer support specialists. We are recovery oriented and provide Veteran-centered care; we use our expertise to deliver intervention, support, and guidance, through a collaborative and flexible approach, to help Veterans progress towards their goals. The MHICM service is holistic in scope which means we not only address mental and physical health challenges, but we also assist with progress towards a self-chosen purposeful life. Specific tasks which define a psychologist’s contribution to the service include: recovery goal plan generation/review/updates, measurement based care tasks, clinical diagnostic assessments, program specific assessments, program screening evaluations, suicide risk assessments, delivery of evidence based interventions, psychoeducation to Veterans and their families/significant-others, clinical case management, and suicide prevention safety planning tasks, as well as appropriate documentation of clinical encounters. Particular focus is given to how issues such as cultural diversity and stigma may impact an individual Veteran’s recovery and how to provide culturally-informed clinical care.
Infectious Diseases and Consult & Liaison Psychiatry
Tara Steinberg, Ph.D.
The HIV, Hepatitis C, HIV/STD prevention (Pre-Exposure Prophylaxis Treatment) rotation is a minor rotation for 8-16 hours that provides training in Clinical Health Psychology using innovative models of care, including the Medical Home Model and Patient Aligned Care Team system. Trainees develop advanced skills in the Specialty Medical Clinics within Primary Care Mental Health Integration (PCMHI). Trainees will gain knowledge of theoretical models and empirical research related to the bio-behavioral etiology and epidemiology of co-morbid medical and psychiatric disorders, as well as evidence-based interventions for Veterans with these conditions. A special focus is on the application of these skills to infectious disease populations. There are opportunities to conduct brief bedside psychotherapy for Veterans in the medical inpatient units through the Consult & Liaison Psychiatry Service. Trainees will function in an interdisciplinary team setting and have opportunities to plan and coordinate activities with infectious disease providers, nurses, psychiatrists, social workers, and psychologists from other clinics. Trainees will gain knowledge in the assessment, diagnosis, and treatment of Veterans living with comorbid medical and psychiatric illnesses, in both individual and group settings, as well as within the context of a family or community. Trainees will have the opportunity to conduct treatment evaluations and psychological assessments, and gain specialty training in therapeutic techniques such as Motivational Interviewing, Mindfulness, and Cognitive-Behavioral Therapy, with an emphasis on brief intervention modalities for health populations.

Women’s Health Center
Alison C. Sweeney, Psy.D.
The Women’s Health Center is a specialty primary care clinic at the Michael E. DeBakey VA Medical Center dedicated to providing a full range of high-quality, compassionate health care services to women Veterans in a comfortable and inviting environment. This rotation focuses on the delivery of gender-sensitive, trauma-informed mental health care in a co-located, integrated and collaborative model with primary care providers. Common mental health concerns addressed in the Women’s Health Center include depression, anxiety, sexual trauma, combat trauma, intimate partner violence, sleep disruption, disordered eating, chronic pain, and difficulties with chronic disease management. Trainees will have the opportunity to develop assessment, intervention, and consultation competencies through (1) conducting brief functional assessments (2) providing brief individual interventions within an evidence-based framework (3) co-facilitating group therapy interventions and (4) engaging in consultation with primary care teams and psychiatry in the Women’s Health Center.

Neuropsychology

General Neuropsychology
Jonathan M. Grabyan, Ph.D.; Adam Christensen, Ph.D.
The Neuropsychology Clinic receives inpatient and outpatient referrals from all the Care Lines within MEDVAMC and satellite clinics, excluding Rehabilitation and Neurology, to include Mental Health, Primary Care, Spinal Cord Injury, General Medicine, and Long Term Care. Populations served include dementias (e.g., Alzheimer’s, Vascular, Lewy Body, Frontotemporal Lobar Dementia), psychopathology, cerebrovascular disease, parkinsonism, substance abuse, ADHD, HIV, demyelinating diseases, toxic-metabolic, and brain tumor. In addition, capacity evaluations are routinely requested from various providers. Evaluations are tailored to individual patient needs and referral questions, using a flexible battery approach. The trainee will have the
opportunity to learn techniques of neuropsychological investigation and principles of interpretation and specific recommendations with regard to the functional and diagnostic significance of findings. It is understood that trainees have varying degrees of assessment experience/exposure to neurological populations and every effort will be made to address each trainee’s individual needs or interests. Additional didactic opportunities are available including the MEDVAMC Neuropsychological Seminar Series, Houston Neuropsychological Society meetings and other relevant educational meetings. There may be opportunities to participate in ongoing research projects with the goal of generating a product.

**General Neuropsychology and Polytrauma**

**Brian Miller, Ph.D.**

Interns may have the opportunity to work with patients referred to the General Neuropsychology Clinic (as described above) and Polytrauma Network Site over the course of a single rotation. The neuropsychology service in the Polytrauma Network Site primarily provides outpatient assessment and treatment to Veterans with polytrauma from Operation Enduring Freedom/Operation Iraqi Freedom, referred from the Rehabilitation and Extended Care Line. These active duty soldiers and Veterans are typically in the post-acute stage of recovery from brain injury and often have suffered other injuries. Evaluations are tailored to individual patient needs and referral questions, using a flexible battery approach. The trainee will have the opportunity to learn techniques of neuropsychological investigation and principles of interpretation and specific recommendations with regard to the functional and diagnostic significance of findings. It is understood that trainees have varying degrees of assessment experience/exposure to neurological populations and every effort will be made to address each trainee’s individual needs or interests. Additional didactic opportunities are available including the MEDVAMC Neuropsychological Seminar Series, Houston Neuropsychological Society meetings and other relevant educational meetings. There may be opportunities to participate in ongoing research projects with the goal of generating a product.

**Rehabilitation and Extended Care Line**

**Nicholas Pastorek, Ph.D., ABPP-CN**

The neuropsychology service in the Rehabilitation Extended Care Line primarily provides outpatient assessment and treatment to Veterans with polytrauma from Operation Enduring Freedom/Operation Iraqi Freedom in collaboration with the interdisciplinary Polytrauma Support Clinic Team. These active duty soldiers and Veterans are typically in the post-acute stage of recovery from brain injury and often have suffered other injuries. Assessment and treatment of the polytrauma survivors entails monitoring cognitive functioning through neuropsychological assessment, improving cognitive functioning and maximizing independence through individual therapy, and facilitating psychological adjustment of the patients and caregivers through psycho-educational feedback sessions. Consults are also routinely received from general inpatient rehabilitation clinics. Neuropsychological evaluation in this context is typically requested to assess competency and to make recommendations regarding assistance and supervision for older adult Veterans recovering from stroke or other acquired brain injuries. This is a rotation where the emphasis is on teaching the basics of neuropsychological assessment (including interviewing, test selection, test administration, interpretation of data, etc.) and exposure to different neurological/psychiatric populations. Test selection is hypothesis driven and findings are compared to normative data and interpreted within an information processing framework. It is understood that trainees have varying degrees of assessment experience and exposure to neurological populations and every effort will be made to individually tailor each training experience. The experiences of trainees on this rotation may vary considerably depending on their familiarity with neuropsychological testing, availability, and goals. In general, it is expected that trainees will become reasonably proficient in administering, scoring, and
interpreting test results within a neuropsychological framework by the end of the rotation. Trainees will also learn about the cognitive sequelae following brain damage, especially traumatic brain injury and stroke, and will become adept at using this knowledge to make functional recommendations and to educate the patients and their families. Trainees will also be expected to attend and to actively participate in neuropsychology seminars. Trainees may have the opportunity to work with extern students and to work under the guidance of the neuropsychology post-doctoral residents.

COMPENSATION & PENSION

Compensation and Pension
Kristy Hoyuela, Ph.D., Samoan Johnson, Ph.D., Valorie King, Ph.D., Avila Steele, Ph.D.,
Compensation and Pension (C&P) Examinations are an integral step in the claims process through which Veterans may be awarded support services related to disabilities incurred or exacerbated by military service. While these supports most often center upon direct financial benefits, other supports include eligibility for medical services, specialized treatment programs, and in-home care for acute medical and mental health conditions. Mental health C&P examination requests typically require the psychologist to determine (1) if a Veteran currently meets DSM-5 criteria for a mental disorder and (2) the direct or indirect relationship between a Veteran’s claimed mental disorder and their military service. Opinions may be requested as to whether a Veteran’s claimed disability renders him/her unable to maintain gainful employment. Examiners also conduct competency exams to determine whether veterans are able to manage VA funds in their own best interest.

Trainees on this rotation will gain exposure to all aspects of completing Compensation and Pension (C&P) Examinations. Trainees will be provided opportunities to review military treatment and personnel records, conduct chart reviews, conduct diagnostic clinical interviews, and write final reports. The role of C&P and its implications for approaching mental health through the recovery model will be addressed throughout the rotation. At the beginning of the rotation, trainees will complete online Compensation and Pension Examination Program (CPEP) certification courses. At the conclusion of this rotation, trainees will demonstrate a working knowledge of relevant legal statutes that guide the VA’s Compensation and Pension system; competence in using structured clinical interviewing; and proficiency with differential diagnoses using DSM-5 criteria. Trainees will use VA’s electronic CAPRI system to complete integrated reports.

GENERAL MENTAL HEALTH

Community Living Center Rotation
Karen Benson, Ph.D
The Community Living Center (CLC) rotation provides a clinical training experience with a broad range of primarily geriatric patients. The CLC is home to ~130 beds for veterans needing long term extended medical care, rehabilitation, or palliative care following an acute hospital stay (e.g., stroke, amputation, fall). The CLC manages the following: Residents with complex medical problems that require long-term skilled nursing care, residents with a terminal illness, residents with relatively short-term problems in need of rehabilitation and discharge planning into the community, residents staying short term for caregiver respite, residents in mental health recovery awaiting guardianship and/or placement following acute hospitalization.
The psychology trainee in the CLC rotation will function as a member of an interdisciplinary team comprised of physician, nurse practitioner, physician assistant, pharmacist, social worker, recreational therapist, physical therapist, occupational therapist, dietitian, nursing staff, and the psychologist. Interns are encouraged to tailor the experience to meet his or her training objectives and will be expected to conduct psychological assessments with veterans including the screening of cognition, mood and behavior symptoms, and determine an appropriate plan of care as well as follow veterans for individual therapy. Interns have the opportunity to provide psychoeducation and caregiver support to family members, develop and implement behavioral interventions for veterans with major neurocognitive disorders, and engage in staff consultation and education. The dominant treatment modality on this rotation is Behavioral and Cognitive Behavioral with a focus on adapting CBT to fit the needs of older adults with complex health challenges and/or cognitive impairment. Trainees may have the opportunity to develop, facilitate, or co-facilitate a group. The trainee will have the opportunity to attend weekly interdisciplinary team meetings to discuss cognitive, mood, and behavioral functioning in the context of a holistic care planning process.

**Bipolar and Schizophrenia Treatment (BeST) Clinic**

**Jared Bernard, Ph.D.**

The Bipolar and Schizophrenia Treatment (BeST) Clinic, under Dr. Jared Bernard, is a specialty clinic within the General Mental Health Clinic (GMHC) that provides evidence-based outpatient services to Veterans with serious mental illness (SMI). Trainees working with Dr. Bernard will have the opportunity to provide individual and group psychotherapy to Veterans with psychotic disorders and bipolar disorder. Examples of available therapeutic approaches include Cognitive Behavioral Therapy for Psychosis (CBTp), Acceptance and Commitment Therapy (ACT), Social Skills Training for Schizophrenia (SST), Life Goals for Bipolar disorder, and Illness Management and Recovery (IMR). Trainees will have the opportunity to work closely with interdisciplinary treatment team members conducting initial assessments and treatment planning, as well as to provide consultation and liaison services to other programs for coordination of care. There may also be opportunities for comprehensive psychological assessment to provide diagnostic clarification and treatment recommendations to Veterans, as well as research and program development.

**General Mental Health Clinic**

**Caitlin Clark, Ph.D.**

The General Mental Health Clinic (GMHC) is an outpatient clinic that provides services to Veterans with a wide range of presenting concerns, including mood, anxiety, trauma-related, psychotic, and cognitive disorders. This rotation focuses on the assessment and treatment of anxiety disorders, including social anxiety, generalized anxiety, panic disorder, phobias (e.g., claustrophobia), and trauma-related disorders (e.g., PTSD, depression). Emphasis will be placed on differential diagnosis and case conceptualization skills as well as flexible implementation of evidence-based interventions. Trainees may opt to focus their rotation on a particular type of clinical presentation (e.g., generalized anxiety disorder, subthreshold PTSD, co-occurring anxiety and depression), or more broadly on a particular type of intervention (e.g., exposure). Trainees will have the opportunity to carry an individual therapy caseload, conduct diagnostic and psychosocial assessments, and participate in interdisciplinary team and case consultation meetings. Additionally, trainees may have the opportunity to co-facilitate a moral injury group for Veterans with psychological and spiritual distress secondary to morally injurious events.
General Mental Health Clinic – Posttraumatic Stress Disorder and Readjustment Issues
Ashley Clinton, Ph.D.
This rotation focuses on treating Veterans with PTSD and related comorbidities, including readjustment issues. Interns will have opportunities to conduct mental health screenings and follow several Veterans for short term individual therapy. A main focus of the rotation will be on diagnostic assessment and treatment planning skills as well as short-term therapeutic interventions. Interns will also be able to participate in multidisciplinary treatment team activities.

General Mental Health Clinic –Anxiety
Jessica Freshour, Ph.D.
This rotation is a minor rotation in the General Mental Health Clinic and offers opportunities to work with veterans with different anxiety disorders, including social anxiety, panic, generalized anxiety, specific phobias and co-occurring disorders. A focus on late life anxiety is available. Trainees also have the opportunities to co-facilitate a CBT for Anxiety group.

General Mental Health Clinic- Geropsychology Rotation
Caryn Glosch, Ph.D.
This Geropsychology rotation takes place within the General Mental Health Clinic and serves outpatient veterans. Referrals typically include older adults struggling to adjust to late-life stressors, such as retirement, complex medical problems, grief and loss, etc., in addition to traditional mental health issues like depression, anxiety, and PTSD. Although the primary focus is on using and adapting evidence-based psychotherapies to older adults, there are opportunities to deliver brief, problem-focused psychotherapy or psychoeducation to veterans who have been diagnosed with dementia and their caregivers, providing education about diagnoses, resources, and caregiving. Interns have the opportunity to co-facilitate the 10-week Memory Skills group, which provides education about how memory works and cognitive compensatory strategies to help veterans deal with memory and attentional complaints. There are limited opportunities to engage in cognitive testing (brief assessments of memory, attention, language, and functional abilities) and capacity evaluations based on interest and availability. Supervision is generally provided in a mentoring atmosphere with more independence assumed as proficiency is demonstrated.

Dialectical Behavior Therapy
Charity Hammond, Ph.D., Emily Hiatt, Ph.D., & Allison Sweeney, Psy.D.
Trainees involved in this rotation will have an opportunity to participate in a DBT program for veterans in the Mental Health Care Line. Patients in the DBT program either meet full criteria for Borderline Personality Disorder or have significant problems in emotional and behavioral regulation, including self-harm behavior, frequent hospitalizations, or high utilization of crisis services. The DBT program consists of individual therapy, skills group, phone coaching, and team consultation meetings. For rotations less than six months, trainees will be introduced to aspects of DBT through co-facilitating a skills group, conducting assessments for Veterans referred for the program, and attending the case consultation meeting. For rotations longer than six months, trainees can learn the full DBT model by having 1-2 individual therapy patients in addition to the above clinical opportunities. For longer rotations, trainees can also choose to start with an 8 hour rotation and then reduce to 4 hours in order to allow for other rotations in their training year.
General Mental Health Clinic – Posttraumatic Stress Disorder/Substance Use Disorder treatment  
Charity Hammond, Ph.D.  
This rotation focuses on integrated dual diagnosis treatment of substance use problems and PTSD. Interns will have the opportunity to participate in group and individual therapy on inpatient and outpatient settings, working with clients in a variety of age groups, combat eras, and stages of change regarding substance use. Patients seen will be part of the general mental health clinic, PTSD clinical team, substance dependence treatment program, and inpatient treatment program for OEF/OIF veterans. Clinical experiences include Seeking Safety treatment, Acceptance and Commitment therapy, Motivational Interviewing, and other cognitive-behavioral interventions including more trauma-focused treatments. Interns can also be involved in case consultations and assessments.

General Mental Health Clinic –Anxiety  
Emily Hiatt, Ph.D.  
This rotation is housed in the General Mental Health Clinic and offers opportunities to work with veterans with different anxiety disorders, including social anxiety, panic, generalized anxiety, specific phobias and posttraumatic stress, and related conditions. Trainees may gain experience providing individual therapy and participating in interdisciplinary team meetings.

GMHC Psychological Testing Clinic  
Joanna Lamkin, Ph.D.  
The Psychological Testing Clinic receives referrals for diagnostic clarification for Veterans currently receiving treatment in the General Mental Health Clinic (GMHC). The clinic addresses a range of referral questions, including differential diagnosis using DSM-5 criteria, personality assessment, evaluation of difficulties with attention and concentration, and evaluation of difficulties in academic domains. Trainees will have the opportunity to strengthen skills in assessment, including: (1) selection of empirically supported test batteries to address the unique referral question, (2) structured administration of test materials and diagnostic clinical interviews, (3) scoring and interpretation of test results, (4) report writing, (5) developing treatment recommendations, and (6) providing feedback to Veterans. Trainees can expect exposure to a variety of presenting concerns and the opportunity to strengthen general diagnostic competency in addition to the domains outlined above.

General Mental Health Clinic  
Jennifer Bogwu, Ph.D.  
The General Mental Health Clinic (GMHC) is an outpatient clinic that provides services to Veterans with affective, psychotic, anxiety, and cognitive disorders. A major goal of the programs in GMHC is to provide recovery-oriented care that helps Veterans achieve the highest possible level of functioning, productivity, independence, interpersonal effectiveness, and overall satisfaction with life. Trainees will have the opportunity to participate in evidence-based, time-limited, group and individual therapy and psychosocial and psychological assessments. Interns have the opportunity to co-facilitate a 12 week Cognitive Behavioral Therapy for Depression group. Trainees will also be able to participate in multidisciplinary treatment team activities and case consultations. If desired, the trainee can tailor the rotation around the assessment and treatment of mood disorders with a special focus on learning evidence-based treatments such as Cognitive Behavioral Therapy and Interpersonal Therapy for Depression. Supervision is generally provided in a mentoring atmosphere with more independence coming later in the rotation.
General Mental Health Clinic – Lesbian, Gay, Bisexual, and Trans Identities Related Concerns
Hiram Rivera-Mercado, Psy.D.
The goal of this rotation is to train future psychologists in being sensitive, innovative, and knowledgeable in working with issues related to LGBT identified Veterans (e.g. mood disorders, trauma, coming out experience, impact of internalized stigma, minority stress, identity development, among others). Trainees will learn ways to help LGBT Veterans navigate the VA system and help advocate for appropriately informed care. Trainees will have opportunities to provide individual treatment using affirming and evidence-based practices (e.g. CBT, IPT, ESTEEM). Also, trainees will have the opportunity to participate in Pride & Courage LGBT group, where they will be able to provide psychoeducation regarding LGBT issues to Veterans. Trainees will work in interdisciplinary teams and develop consultation skills in regards to LGBT identities. Program development opportunities and outreach participation may be available depending on interest and training committee approval.

General Mental Health Clinic- BeST Clinic
Randy Whittles, Ph.D.
BeST clinic, is a specialty clinic within the General Mental Health Clinic (GMHC) that provides evidence-based outpatient services to Veterans with serious mental illness (SMI). Trainees working in this rotation will have the opportunity to provide individual and group psychotherapy to Veterans with psychotic disorders and bipolar disorder. Examples of available therapeutic approaches include Cognitive Behavioral Therapy for Psychosis (CBTp), Acceptance and Commitment Therapy (ACT), Social Skills Training for Schizophrenia (SST), Life Goals for Bipolar disorder, and Illness Management and Recovery (IMR). Trainees will have the opportunity to work closely with interdisciplinary treatment team members conducting initial assessment and treatment planning, as well as to provide consultation and liaison services to other programs for coordination of care. There may also be opportunities for comprehensive psychological assessment to provide diagnostic clarification and treatment recommendations to Veterans, as well as research and program development.

TRAUMA & POSTTRAUMATIC STRESS DISORDER

PTSD Clinical Team
Helen Minette Beckner, Ph.D.
The PTSD Clinical Team (PCT) rotation offers trainees experience in assessment and treatment of psychological trauma and, more specifically, the diagnosis of PTSD. The clinic serves Veterans of all ages and combat eras presenting with military-related trauma (combat trauma, military sexual trauma), as well as non-military-related trauma histories. The clinical training experiences on this rotation would involve assessment focused on the diagnosis of PTSD (e.g., Clinician-Administered PTSD Scale for DSM-5/CAPS-5) and psychotherapy interventions with an emphasis on evidence-based therapies to include Prolonged Exposure Therapy (PE) and Cognitive Processing Therapy (CPT). Therapy training experiences include individual therapy, as well as group therapy. Within this rotation, trainees would have the opportunity to facilitate CPT groups, with one group focused on providing treatment for female Veterans. The PCT functions as a specialty clinic staffed by a multidisciplinary treatment team.
Posttraumatic Stress Disorder Clinical Team (PCT)
Nancy Jo Dunn, Ph.D.
The PTSD Clinical Team (PCT) rotation offers trainees the opportunity to work in a specialized assessment, consultation, and treatment program designed to address psychological trauma (e.g., combat trauma, military sexual trauma, non-military-related trauma) in Veterans of all ages and combat eras in an outpatient setting. Assessment experiences include a focus on the diagnosis of PTSD (e.g., Clinician-Administered PTSD Scale for DSM-5/CAPS-5) and consideration of other comorbid conditions (e.g. depression). The rotation also focuses on evidence-based psychotherapy, including Cognitive Processing Therapy (CPT) and Prolonged Exposure Therapy (PE). Trainees have the opportunity to co-facilitate an In Vivo Group for Veterans who have completed CPT or PE, and an Insomnia/Nightmare Group. Clinical activities within the PCT occur within the context of a multidisciplinary treatment team.

Posttraumatic Stress Disorder (PTSD) Clinical Team
Lisa Robinson, Ph.D.,
This rotation affords the opportunity to work in a specialized assessment, consultation, and treatment program designed to address psychological trauma (e.g., combat trauma, military sexual trauma) in veterans of all eras in an outpatient setting. The rotation offers a focus on evidence-based psychotherapy, including prolonged exposure therapy and cognitive processing therapy (applied in both group and individual psychotherapy formats) within the context of a multidisciplinary treatment team.

The Center for Innovative Treatment of Anxiety and Stress (CITRAS)
Ellen J. Teng, Ph.D.
This rotation offers trainees experiences in assessment and time-limited individual and group psychotherapy within the context of clinical research. The Center for Innovative Treatment of Anxiety and Stress (CITRAS) is a research program within the Mental Health Care Line focused on developing, evaluating, and enhancing measurement-based care for Veterans with anxiety and stress-related disorders. Trainees will engage in diagnostic clinical interviewing using standardized structured interviews such as the Structured Clinical Interview for DSM (SCID), Anxiety Disorders Interview Schedule for DSM (ADIS), and Clinician Administered PTSD Scale (CAPS). There are also opportunities to participate in treatment outcome research examining innovative methods of delivering evidence-based treatments for anxiety and stress-related disorders such as moral injury, using intensive weekend treatment formats and transdiagnostic cognitive behavioral approaches. As part of this rotation, trainees will participate in weekly research team meetings that focus on preparing for academic and clinical research careers. Research meetings also include a structured writing team to support trainees in developing a manuscript ready for submission by the end of the training year.

Posttraumatic Stress Disorder (PTSD) Clinical Team
Karin Thompson, Ph.D.
This rotation affords the opportunity to work in a specialized assessment, consultation, and treatment program designed to address PTSD or subthreshold PTSD in veterans of all eras in an outpatient setting. Common traumatic experiences include combat trauma, sexual trauma, childhood trauma, natural disasters, and accidents. The rotation offers a focus on evidence-based psychotherapy, including prolonged exposure therapy and cognitive processing therapy, within the context of a multidisciplinary treatment team. Other opportunities may assessment and treatment planning; program development and evaluation; community outreach; and mental health administrative experiences. A specialized opportunity for a subset of trainees involves
engagement in the VA’s Prolonged Exposure rollout training. This involves completion of a 4-day workshop combined with successful completion of cases under consultation.

**PTSD Clinical Team (PCT) – with Telehealth option**

*Kathleen Szydlowski, Ph.D.*

This PTSD Clinical Team (PCT) rotation provides trainees the opportunity to conduct assessments of trauma-related symptoms and to provide frontline, evidence-based psychotherapies to Veterans with PTSD. In terms of assessment experiences, trainees can advance their competency in making differential diagnosis, administering the Clinician-Administered PTSD Scale for DSM-5 (CAPS-5), and utilizing measurement-based care to inform treatment planning. Trainees on this rotation will gain focused experience providing Prolonged Exposure Therapy (PE) and/or Cognitive Processing Therapy (CPT) individually to Veterans with a range of military- and non-military-related trauma histories. Consistent with the VA’s commitment to enhance access to care for Veterans, trainees on this rotation have the option of learning to provide these services via telehealth. Other experiences include the opportunity to attend weekly multidisciplinary team meetings and engage in case consultation.

**Posttraumatic Stress Disorder (PTSD) Clinical Team**

*Wright Williams, Ph.D., ABPP*

The rotation focuses on refining skills in group and individual psychotherapy for Veterans with PTSD. Trainees will carry a caseload of up to four clients participating in individual PE or CPT while leading a long term group of Vietnam combat Veterans, a support group for Korean War Veterans and co-leading an 8 session Meditation group teaching Veterans to develop their personal meditation practice. Opportunities on this rotation include learning how to customize empirically supported treatment to fit the Veteran, and videotaped supervision is provided. There may be additional opportunities to participate in research focused on how psychotherapy changes the brain and the relationship between interpersonal trust and treatment success in Veterans with PTSD.

**SUBSTANCE DEPENDENCE**

**Substance Disorders Treatment Program**

*Jocelyn Abrams, Ph.D.*

Trainees on this rotation will primarily provide care facilitating Veterans’ recovery from substance use disorders. Trainees will gain experience working collaboratively on an interdisciplinary treatment team, while also doing individual therapy, case management, treatment planning, and assessment with Veterans presenting with a Substance Use Disorder diagnosis. This rotation encompasses gaining experience with group with the possibility of either co-facilitating or leading a group. Groups include early recovery and relapse prevention skills using the MATRIX model of the Substance Abuse and Mental Health Services administration (SAMSHA), support group and coping/stress management group are available. There is also the opportunity for trainees to learn CBT-SUD (CBT for substance use disorders), and gain experience with motivational interviewing (MI) /motivational enhancement therapy (MET). Trainees may be interested in experiences with consult liaison services on inpatient medical and psychiatric units. There are also opportunities to treat co-occurring PTSD and substance use within SDTP on this rotation using evidenced based treatments.
Substance Disorders Treatment Program  
Mercedes Carswell, Ph.D.  
Trainees on this rotation will gain experience in psychotherapy, case management, treatment planning, and assessment with Veterans presenting with a primary Substance Use Disorder diagnosis. A typical rotation schedule will include individual psychotherapy, case management sessions, and psychotherapy/ psychoeducational groups. Trainees will have the opportunity to attend, and participate in, a weekly interdisciplinary patient staffing. Additionally, trainees interested in providing early intervention can assist with inpatient consults as the rotation schedule allows. Training in evidence-based interventions for SUD is emphasized during the rotation. Focused training in MET and/or CBT-SUD is available for interested trainees. Trainees will also be asked to complete at least one psychological assessment during the rotation which will include a personality instrument (e.g., PAI, MMPI-2-RF). Trainees on this rotation will work collaboratively in a multidisciplinary environment. They will have opportunities develop their skills in case conceptualization, assessment of SUD, treatment planning, facilitating groups, and providing psychotherapy and case management for Veterans with SUD.

Substance Dependence Treatment Program  
Jill K. McGavin, Ph.D.  
The Substance Dependence Treatment Program (SDTP) is an outpatient program which helps Veterans recovery from addictions to alcohol and drugs (primarily cocaine, but also opioid and marijuana). In addition to addictions, many Veterans receiving treatment in SDTP also struggle with homelessness, unemployment, other mental illnesses, and medical and legal problems. Veterans are assessed using the Brief Addictions Monitor at the outset of treatment and the SDTP is moving towards measurement-based care for addictions. The major treatment modality of SDTP is group-based education on early recovery and relapse prevention skills using the MATRIX model of the Substance Abuse and Mental Health Services administration (SAMSHA). Support groups and a variety of specialty groups (Sober Seniors, Grief Group, Smoking Cessation, Coping Skills, Sexual Addiction, and others) are also available. Depending on their particular schedule, trainees have the opportunity to serve as co-leaders, and possibly leaders, of various groups as well as gain experience in individual therapy, psychological assessment, breathalyzer testing, treatment planning, discharge planning, and interdisciplinary treatment team meetings within SDTP and with community partners. The main training goal is to increase trainees’ knowledge base and comfort level in assessing and treating substance use disorders.

Substance Disorders Treatment Program  
Paige Morrison, Psy.D.  
Trainees will learn to function as a member of an interdisciplinary team including social workers, addictions therapist, and psychologist. The Substance Dependence Treatment Program is an outpatient subspecialty of the General Mental Health Clinic, with experiences consulting with inpatient teams. Within the program, trainees will learn to function as a member of an interdisciplinary team including social workers, addictions therapists, physicians, Pas and psychologists. Trainees will have the opportunity to engage in group and individual therapy, telehealth services, and consult services at bedside for medicine units and within psychiatry inpatient units. Trainees will learn about addiction and co-occurring mental health and physical disorders. Trainees can gain exposure to the intensive outpatient and outpatient levels of care, as well as learn to determine the level of care needed by the patients. Trainees can gain familiarity with motivational interviewing, 12 step facilitation, CBT-SUD, measurement based treatment using the Brief Addictions Monitor, and the Substance Abuse & Mental Health Service Administration’s (SAMSHA’s) Matrix Model curriculum. Specific to this rotation: Dr. Morrison runs an ACT for SUD group (Friday) which trainees can observe, co-facilitate or lead depending on personal interest. Trainees are likely to gain experience in consultation liaison and recent
research in this area (Wednesdays and Fridays). Telehealth case management and therapy experience will likely be available on this rotation. Trainees can work with Dr. Morrison to better integrate technology into patient care.

Substance Disorders Treatment Program
Jessica Spofford, Ph.D.
This rotation is within a specialty outpatient clinic, Substance Disorders Treatment Program (SDTP), designed to help Veterans recover from addiction. Trainees will have the opportunity to develop an understanding of the complexities with which many of the Veterans in this clinic often present, such as homelessness, unemployment, relational strain and interpersonal difficulties, medical and legal concerns, and other mental health related illnesses. Training experience includes gaining experience in diagnostic interviewing, with a focus on substance use history, upon the initial referral of a Veteran to SDTP. This rotation also encompasses learning how to assess a Veteran’s recovery progress using the Brief Addictions Monitor – Revised (BAM-R). A significant focus on this rotation is in gaining experience with group, with the possibility of either co-facilitating or leading a group, including psychoeducational groups with use of the MATRIX model of the Substance Abuse and Mental Health Services administration (SAMSHA), as well as with evidenced-based treatment groups such as Interpersonal Therapy (IPT) for Depression and Substance Use Disorders and Dialectical Behavior Therapy (DBT). There is also the opportunity for trainees to learn how to implement contingency management (CM) for treatment of stimulant use disorders. Other experiences on this rotation may encompass individual therapy, psychological assessment, treatment and discharge planning, offering consult liaison services on inpatient medical and psychiatric units, and engaging in interdisciplinary SDTP treatment team meetings. The primary goal of this rotation is for trainees to develop basic understanding of assessment and treatment, etiology, and case conceptualization of substance use disorders.

PSYCHOSOCIAL REHABILITATION & RECOVERY

Psychosocial Rehabilitation and Recovery Center (PRRC)
Amy Cuellar, Ph.D.
Trainees on this rotation will have the opportunity to learn how to deliver recovery-oriented services to a population with serious mental illness. Interns will learn the basics of psychiatric rehabilitation that focuses on helping Veterans achieve self-identified goals for recovery, better psychosocial functioning, and greater integration in their communities. Trainees will conduct screening assessments that focus on helping Veterans identify recovery goals, individual recovery coaching sessions to help them problem solve around goal achievement, and psychoeducational and skills-based groups, such as Social Skills Training for Schizophrenia, Illness Management & Recovery, and Wellness Recovery Action Plan development.

INPATIENT & RESIDENTIAL TREATMENT

Geropsychology Inpatient Unit
Cynthia Kraus-Schuman, Ph.D.
This rotation involves working with veterans in an inpatient psychiatric setting. As the unit population permits, the focus of this rotation will be working with older adults and adults with dementia. Treatment teams on 6F are comprised of psychiatrists, social workers, physician assistants, and nursing staff. Interns on this rotation are expected to conduct groups, follow
veterans for individual therapy, and attend multidisciplinary treatment team meetings. Other opportunities for this rotation may include participating in family meetings, administering dementia assessments, program development, and research. The dominant treatment modality on this rotation is Cognitive Behavioral Therapy.

**Women's Inpatient Specialty Evaluation & Recovery Program (WISER) and Returning OEF/OIF Veterans Environment of Recovery Program (ROVER)**

**Katie O'Byrne, Psy.D. & Jill Wanner, Ph.D.**

The WISER rotation will provide trainees with a unique opportunity to work with female combat Veterans from all era’s in a trauma-informed, intensive 4-5 week long inpatient program. This program will provide comprehensive evaluation and intensive specialized treatment using evidence-based treatments, such as, Dialectical Behavior Therapy Skills, Cognitive Processing Therapy, and Seeking Safety. WISER Veterans typically have a diagnosis of PTSD, substance abuse (SUD), interpersonal difficulties and/or personality disorder. There is some flexibility within the rotation to tailor to the experience to the trainee’s goals. Opportunities include participating in: Treatment Team Rounds (multidisciplinary meeting with each individual patient on the unit lasting approximately 2 hours) and Treatment Team staffing where patient applications are reviewed for acceptance into the program; conducting CPT group and individual CPT trauma account sessions; Administering and interpreting psychological evaluations (mini-reports); and Participating in other evidence-based groups such as Seeking Safety, and DBT.

The ROVER rotation will provide psychology trainees with a unique opportunity to work with male combat Veterans from the OEF/OIF/OND era in a trauma-informed, intensive 4-5 week long inpatient program. This program will provide comprehensive evaluation and intensive specialized treatment using evidence-based treatments, such as, Dialectical Behavior Therapy Skills, Cognitive Processing Therapy, and Seeking Safety. ROVER Veterans typically have a diagnosis of PTSD, substance abuse (SUD), interpersonal difficulties and/or personality disorder. The trainee can co-create the rotation goals. Trainees will have the opportunity to: Attend Treatment Team Rounds (multidisciplinary meeting with each individual patient on the unit lasting approximately 2 hours); Participate in Treatment Team staffing where patient applications are reviewed for acceptance into the program; Co-facilitate and potentially lead a 1.5 hour CPT or DBT group most days; Conduct individual CPT trauma account sessions; Conduct and interpret psychological evaluations (mini-reports); Participate in other evidence-based groups such as Cognitive Processing Therapy, Seeking Safety, and DBT.

**Inpatient Program, 6A Rotation**

**Elaine Savoy, Ph.D.**

The 6A Inpatient rotation under Dr. Savoy provides trainees with exciting opportunities to develop professional skills on the MEDVAMC's primary, 32-bed acute psychiatric specialty unit. During Veteran hospitalization, the primary aims of the unit are to foster and support recovery journeys and to assist Veterans with successful, safe transition to outpatient services. The 6A inpatient rotation offers trainees opportunities to engage in a variety of ongoing treatment and administrative activities related to delivery of evidence- and recovery-based services to Veterans on the 6A unit. Clinical responsibilities include involvement in a multi-disciplinary team, treatment planning, development of recovery-based case conceptualization, best practice staff-Veteran interactions, and evidence-based group psychotherapy [e.g., SAMHSA toolkit implementation, CBT for psychosis (CBTp), DBT Skills, Acceptance and Commitment Therapy, and Cognitive Rehabilitation]. Clinical opportunities include behavioral assessment, aggression prevention, team feedback, as well as individual psychotherapy consistent with the Veterans’ individualized treatment plans and recovery objectives. Additional opportunities include
assessments to support decision-making/track Veteran progress, Care Monitoring Meetings, and examination of relevant peer-reviewed literature to improve practices.

**Workplace Violence Prevention Program (WVPP) Rotation Description**

**Justin Springer, Ph.D**

The WVPP rotation is designed to provide Psychology Trainees with an opportunity to develop proficiencies in mitigating risk associated with violent behavior throughout the MEDVAMC and CBOCs. Trainees on this rotation will have the opportunity to be a part of the Disruptive Behavior Committee (DBC), which is an executive committee designed to ensure safety in the hospital. Trainees on this rotation will have the opportunity to conduct threat assessments on patients and to mitigate threats via consulting with care teams in conjunction with the Threat Triage Team. Trainees will have the opportunity to work on a multidisciplinary team to establish Orders of Behavioral Restriction (OBRs) and Patient Record Flags (PRFs) in conjunction with the DBC’s Incident Review and Assessment Committee (IRAC). Though the DBC’s Employee Threat Assessment Team is currently unavailable to trainees due to privacy concerns, there are opportunities to develop an understanding of issues surrounding detection and mitigation of employee threats. Finally, trainees will be able to engage in numerous performance improvement opportunities using Disruptive Behavior Reporting System (DBRS) and Workplace Behavioral Risk Assessment (WBRA) data that are designed to provide the DBC with actionable recommendations to enhance safety. In sum, this rotation seeks to provide trainees with a foundational understanding of the Workplace Violence Prevention Program Model, of the components and committees that work in concert to maintain safety at work, and of risk mitigation strategies.
